**MONTHLY LANDSCAPE MAINTENANCE REPORT
FISH HAWK RANCH III CDD
November 23, 2011**

Mowing operation.

Contract start up on November 1, 2011. Mowing operation includes string trimming, edging, blowing off and debris pick up. This was done every other week in November. No pruning done due to time of year. Lots of moss and debris picked up along main entry road medians. Weeds hand pulled.

Pest Control/Fertilization.

All shrubs sprayed preventative and curative treatment fungicide and insecticide for leaf spot on Hawthorn and thrips on Plumbago. Entire property spot sprayed for emerging weeds. Zoysia and Palms fertilized this month. All Bahia turf areas treated for weeds. Ants treated at clubhouse and along walking paths.

Irrigation

Inspection of irrigation system was performed. About 200' of clogged drip tube replaced. Azaleas and viburnum manually watered, and a lateral line break repaired at the south side of the tennis courts.

Proposals

Proposals were submitted for annuals replacement and mulch application

Notes:

There is a significant weed population in much of the Bahia turf; most weeds are turning yellow due to herbicide treatment. The plumbago at the clubhouse/tennis court area was suffering from thrip damage and now seems to be responding to insecticide application. Azaleas in several areas have been wilting – drip line replacement should solve the watering problem. Some dry spots were noted in the zoysia at the clubhouse, we are manually watering and the repair made there should address that issue. LMP personnel began using communication book at clubhouse week of November 21, 2011.
